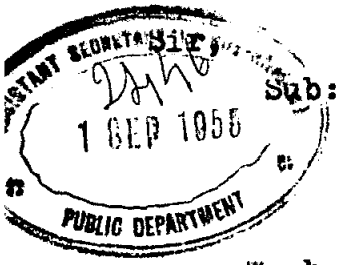
PVD

To

The Hon. Chief Minister of
M A D R A S.



Sir,

Sub: Representation by the Members of the Le lature from South Kanara District reg. proposals for the Second Five Year Plan.

We have carefully examined the draft proposals of the Madras Government to be incorporated in the Second Five Year Plan. We regret to note that the needs and requirements of South Kanara District have not been carefully examined nor provided for.

2. In the post independence period, this district was totally neglected and as such, generous treatmen of the district at this stage is called for (vide - recommendations of the Dhar Committee).

3. We regret to note that in the draft proposals about the new Railway lines, the Railway link betwee Mangalore and Bombay has not been included. A look at the Railway map of India would show that this area has been ill-served by the Railways. The impor tance of this link cannot be exaggerated. This was noticed by the Railway Administration and the Hon. Minister for Railways has more than once stated on t floor of the Parliament that he considers this link

nk is being conducted. We hope this omission an accidental one and the Government would be eased to include this link in the proposals to submitted to the Planning Commission.

In the State sector of the Planning, no jor industry is recommended to be included in e district. Only one irrigation scheme of some portance is included in the proposals. It is matter of pity that in matters like roads and idges where our needs are very great, the fund distributed between the several districts on e basis of population, whereas different princi-es of evaluation are adopted for different sectors the matter of irrigation, our rain-fall is con-dered as being against us. Though it is well-own that most of the water flows into the river d there is an acute shortage of water in the dis-rict during summer months. As regards the alloca-on of other industries, non-existence of raw terials is made a ground of our exclusion. In e matter of rural electricity the lack of avail-bility of power is considered as a point against . By a curious coincidence of circumstances each e of the consideration turns to be against us.

It will not be denied that our needs are as

great as others and our area is as backward as that of any other area in the State. Hence, some common rule of equitable distribution of the total funds provided for the State sector of the Plan may be adopted. Normally the population has been a guiding rule. We would request you to allocate to our district a portion of the total funds either on the basis of population or any other accepted basis and after doing so, we would assist the Govern ment for distributing the same to meet our immediate requirements. This is all the more necessary now as this region is linguistically separate from the rest of the State and there is a possibility of our being separated from the State if the State Re-organisation Committee so recommends.

We are grateful to you and your Cabinet for treating us as justly in the past. We are sure that the omissions in the proposals are merely accidental and we would be only too glad to correct any errors.

Madras,
25th Aug. 55.

Yours faithfully,

M.L.A

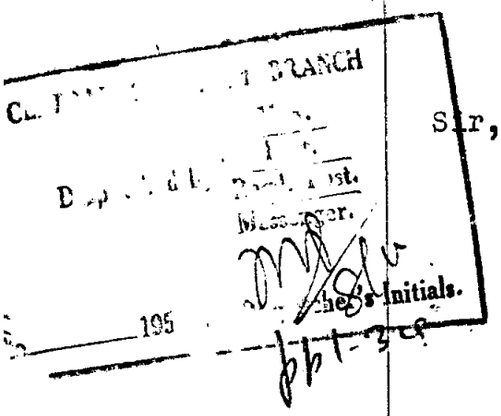
Letter Ref. No. 2246/55-2 D/7.

To

Shri K.S.Hegde, M.P.,
Advocate,
Karnad Sadashiva Rao Road,
Mangalore, S.Kanara.



Sir,

Sub:- Second Five Year Plan - South Kana District.

Ref:- Letter from the M.Ps., M.L.As of South Kanara district, dated 25- addressed to the Chief Minister of Madras.

With reference to your letter cit I am directed to state that in framing the gene schemes at State level, the needs of the distri and the resources available in each district ar usually taken into consideration. Accordingly, schemes at State level for the Second Five Year have been drawn up in consultation with the Hea of Departments concerned. In formulating the s for inclusion in the Second Five Year Plan, the needs of all districts including the South Kana District have been taken into account. There i therefore no ~~case for the~~ occasion whatever for the people of South Kanara District have any special sense of grievance in the matter.

A note explaining the position regard to various schemes in the Second Five Ye Plan referred to in the letter cited is enclose

---

Railway Lines

So far as the South Kanara District is concerned, a major ~~proposal~~ scheme for a railway line from Mangalore to Hassan has already been recommended for inclusion in the Second Five Yea to the Govt. of India and a surv of this project is reported to be in progress. The proposal for a railway line between Mangalore and Bombay is being examined by this year. in consultation with the Board of Revenue.

Roads

The Chief Engineer (Highways) has reported that the allotment for road works prope under the Second Five Year Plan will be distributed among the various districts based on area, popula tio and revenue, taking into account the needs of each locality and making special provision for backward areas. The needs of South Kanara district will be duly considered by the C.E. in relation to the need of other districts in the State while drawing up the detailed plan.

Irrigation

In South Kanara District assured supply of water is required only during the second crop season, ~~and~~ This could be obtained by the construction of masonry dams across rivers and streams and as many works of the kind as possible have been and are being taken up in this district under the Grow More Food and the Intensive Cultivatio Schemes and the Special Minor Irrigation Programme. ~~When~~ Small irrigation schemes for South Kanara Dt. come up for sanction of the Govt., ~~they~~ are always given a special consideration ~~taking into account~~ in view of the peculiar geographical features of the district. ~~which do not allow of a major or minor irrigation scheme of a remunerative character being taken up.~~ Medium

The C.E.(I) has also been directed to take up as many schemes as possible of the type of salt-water exclusion dams to prevent ingress of salt water which will spoil the arable lands.

As regards major irrigation projects, so far as the major irrigation projects are concerned, they cannot be taken up on a talukwise or districtwise basis but only with reference to the availability of water supplies and engineering feasibility. So far as the South Kanara district is concerned, this Govt. have proposed for the Haladi reservoir Project a provision of Rs 20 lakhs has been included in the Second Five Year Plan for Haladi Reservoir Project, which, on completion, will provide irrigation facilities during the Second Plan period. The projects which are completed for 10000 acres in the S.K. Dt.

Power

The Madras Government have arrived at an agreement with the Mysore Govt. for supply of power to South Kanara District from Jog. The work on which is under progress and the supply is expected to be available by about the middle of 1956. It is expected that with the availability of Jog power, the pace of rural electrification in South Kanara District will be quickened. Accordingly the Electricity Department will be constructing the lines to Coondapoor area to enable extension of supply in the area in the first instance from the existing Udipi Thermal Station in advance of the receipt of Jog power.

Two major electricity extension schemes, viz., the Mangalore-Puthur and Mangalore-Kasaragode are under the consideration of the Electricity Department. These schemes envisage supply to about 7 important villages in South KanaraDistrict. It is proposed to extend electricity to 150 villages and 1685 agricultural pump sets in the District at an approximate cost of Rs 83 lakhs during the Second Five Year Plan period.

Industries

The Madras Govt. recommended to the Planning Commission about 12 major and medium industrial projects for inclusion in the Second Five Year Plan. The Planning Commission has stated that the development

of large and medium scale industrial projects will be undertaken by the Centre on an All-India basis and that the State Plan need not make any provision for such schemes.

As regards other industries, such as cottage industries, small scale industries, village industries, Handicrafts, etc., South Kanara District will receive a fair share of attention .

Public (P & D) Dept.

Sub:- Second Five Year Plan - South Kanara District

The letter from the M.L.As. and M.Ps. of the South Kanara District in the c.f. and the minute of C.M. on page 1 c.f. may be perused. The Members have stated that the needs and the requirements of the South Kanara District have not been carefully examined nor provided for in the preliminary draft proposals for the Second Five Year Plan a copy of which was supplied to them. They have requested that a portion of the total funds allotted under the Second Five Year Plan may be allocated to South Kanara District either on a population basis or any other basis.

2. It is not the policy of the Govt. to allocate lump sum ~~provision~~ for each district under the Second Five Year Plan either on population basis or any other basis. In framing the general schemes at State level, the needs of all the districts and the resources available in each district are usually taken into account. Accordingly, the schemes at State level for the Second Five Year Plan have been drawn up in consultation with the Heads of Departments. In formulating the schemes for inclusion in the Plan, the needs of all districts including the South Kanara District have been taken into account. A statement showing the break-up of the more important general schemes formulated at State level which will benefit the South Kanara District is put up below. Copies of this statement have already been supplied to all M.L.As., M.L.Cs. and M.Ps. of the District. There is no case for the South Kanara District to have any special grievance in the matter.

3. With reference to paras 3 and 4 of the letter, P.W.D. and I.L.C. may see for ~~remarks~~.

PW (P2)

Please see the notes on pages 1-2 abo

2. With reference to para 3 of letter on pages 1-2 cf., it is submitted th a similar letter in regard to the request relating to the Construction of Mangalo Bombay line alone was received from Sri M.P. and certain M.L.As. and that this has b referred to the Board of Revenue for r early remarks.

3. However the position in respect the railway projects recommended by the Govt. for inclusion in the Rly. Board Second Five Year Plan is briefly indicat below.

The State Govt. have recommended in September 1954 the following thirteen ne and important railway projects for inclus in of the Second Five Year Plan of the Rly.

(1) Theni - Cuddalur Line.
(2) Negapatti - Vriddhachalam - Salem (Broad Gauge
(3) Salem - Bangalore Line
(4) Chinnasalem - Chengleput Line

(5) Mangalore-Hassan Line.
(6) Tirunelveli - Cape Comorin Line.
(7) Salem - Tiruchirapalli Line.
(8) Manamadurai - Tuticorin Line
(9) Tanjore - Pattukottai Line.
(10) Conjeevaram - Vellore Line.
(11) Satyamangalam Chamrajnagar Line.
(12) Tellicherry - Mysore Line
(13) Kollengode - Trichur Line.

Besides these lines a proposal for extension of electrification of Rly. system beyond Tambaram was also recommended. Another proposal for a railway line from Manamadurai to Virudhu via Aruppukottai is also being recommended India for inclusion as the 14th item in the list. It is doubtful whether more than four or six out of the above projects will be taken for inclusion of the second execution during the plan period, as the Rly Bd have proposed limit the mileage of new line construction. is therefore no scope to recommend any n lines until those already recommended take a defini

4. So far as the S.K. Dt. is concern a major proposal for a railway line from Mangalo Hassan has already been recommended and survey of this project is reported to be in progress. As such there appears to be no nee to include another project from Mangalore to Ba in the plan period. However this proposal will examined as soon as the Bd's remarks are rece

5. With these remarks, the pl

may be passed on to the P.L.C. Deptt.

14.9.55

14.9.55

Second Five Year Road Plan — Distribution of allotment to South Kanara district

In para 4 on p 2 of it is represented that in matters like roads and bridges where the needs of the district are very great, the fund is distributed between the several districts on the basis of population, whereas different principles of evaluation are adopted for different sectors. The CE (H) has reported in another connection that the allotment for road works proper under the plan will be distributed among the various districts based on area, population and revenue taking into account the needs of each locality and making special provision for backward areas. The draft plan is proposed to be drawn for a total cost of Rs 19 crores though the expenditure will be restricted to Rs 11½ crores during the plan period. The needs of South Kanara district will be duly considered by them in relation to the needs of other districts in the State while drawing up the detailed plan. Hence no action is called for on the present representation.

As regards irrigation, it is submitted that in South Kanara District assured supply of water is required only during the second crop season that this could be obtained by the construction of masonry dams across rivers and streams and that as many works of the kind as possible have been and are being taken up there under the Grow More Food and the Intensive Cultivation campaigns and Special Minor Irrigation Programme. The investiga of major schemes such as Halady and Bijur have already been taken up and the investigation of th former has been completed.

The M.L.As and M.Ps have in their representa on p.2 c.f. stated that only one irrigation schem has been included in the Second Five Year Plan, in the matter of irrigation the rainfall is consi as being against them and that though most of the water flows into the river there is an acute shortage of water in summer months. It may be pointed out that in regard to the second five ye plan, the Chief Engineer submitted certain propo which were scrutinised, a plan was formulated and sen to the Government of India. These proposals did not contain any scheme for South Kanara. The matt was further considered. When the Development Commission, with a view to finalising the schemes had talks with the Chief Engineer etc. on 7-9-55 it was decided that the Halady scheme for the Sou Kanara District should be included. It may be pointed out that irrigation projects cannot be ta up on a talukwise or districtwise basis but only with reference to the availability of water supp and engineering feasibility. Everything possible has been done by the Government to develop the

plan is with reference to the ceiling of funds fi
by the Planning Commission, nothing further, it s
can be done for South Kanara District, so far as i
can be seen at present.

So far as inclusion of minor irrigation schem
in the South Kanara District, in the Second Five Y
Plan, A(F.P) may see for remarks.

9/53
15.9.53

Rural Electrification in South Kanara District.

As stated by the Honourable Members in para 4 on p.2 c.f., the lack of availability of power is the main cause for the slow rural electrification of South Kanara Dt., the nearest source of power being Pykara. The question of erecting a thermal station in Kasaragode was examined in 1948 but it was dropped as the schem was found to be unremunerative. However the Gov have arrived at an agreement with the Mysore Gov for supply of power to South Kanara Dt. from Jog the work on which is under progress and the supp is expected to be available by about the middle of 1956. It is expected that with the availability of Jog power, the pace of rural electrification in South Kanara Dt. will be quickened. Accordingly the Elec Dept will be constructing the lines to Coondapoor area to enable extension of supply in the area in the first instance from the existing hydel thermal station of the receipt of power.

2. Two major electricity extension schemes viz. the Mangalore-Puthur and Mangalore-Kasaragode are under the consideration of the Electricity Department. These schemes envisages supply to the following important villages in South Kanara Dt. and are estimated to cost finally Rs.72.004 lakhs:-

(1) Uppinangadi
(2) Puthur

(4) Kasaragode

(5) Kumbla

(6) Nileshwar; and

(7) Hosdrug

These schemes will be submitted by the C.E.(E) to the Govt. shortly. After sanction they are expected to be completed during the initial period of the Second Five Year Plan. (Kasaragode is having thermal power distributed by the South Kanara Ceramics Ltd. and it is proposed to supply Jog power as soon as it is available.) It may also be submitted that during the 2nd Plan period it is proposed to extend electricity to 150 village and 1685 pumpsets in the Dt. at an approximate cost of Rs.83 lakhs.

3. The question of extending supply of power to the rest of the villages in South Kanara Dt. is under consideration of the Electricity Department.

The notes of Pub (P&D) and PWD on pp. 1-2 above may be perused. The file has come to this dept. w.r.t. to A and B on p. 2 cf.

Regarding the complaint that no major industry is proposed to be

related in Kanara dt. under Second Five Year Plan. It is noted at pt 8 of a dozen schemes for any 4 medium industries proposed in preliminary Draft proposals, of this State, Planning Commission has rejected all but two. On this basis, there should be little cause for complaint that Kanara has been neglected.

As regards other industries attention might be given to several schemes for village and cottage industries, small scale industries, hill industries, handicrafts, & rural and handlooms mentioned on pp. 1 & 4-5 of draft at (H). It will be evident that S. Kanara has received its fair share of attention.

The case may be placed on file

Please see the letter at pp. 1-3 C.F. from Sri K. S. Hegde M.P. and other M.L.As from S. Kanara dt. The points raised therein have been examined by the concerned Depts in the notes from p. 1 ante and the file has

II B

38378

SECY.
23 SEP 1955

been sent to this Deptt for remarks with reference to X at p.b ante. In the circumstances, a perusal is solicited of the letter at M on p. 5 ante. It may be mentioned here that small irrigation schemes for S. Kanara dt coming up for sanction of the Govt are always given a special consideration taking into account the peculiar geographical features of the dt which do not allow of a major or minor irrigation scheme of perennial character being taken up. The CE (I) has also been directed to take up as many schemes as possible of a hydro salt-water exclusion dams to prevent ingress of salt water into the arable lands.

2. As regards the provision for small irrigation schemes for the dt in the Second Five Year Plan, it may be mentioned that no district-wise provision has been proposed, inasmuch as schemes proposed to be taken up will be so large in number and so small in value that details of schemes for each district have not been worked out. As against a provision of Rs. 410/- lakhs proposed by the State in the draft Second Five Year Plan for Small Irrigation Schemes, the working group of the Planning Commission has reduced the provision to Rs. 210/- lakhs. While sending the revised pro forma, it has been proposed to press for an increase in the minimum enhanced provision of Rs. 250/- lakhs under this head of development, impressing upon the Go

even Rs. 250/- falls [illegible] and the necessity for entrusting the [illegible] for the actual implementation of the PA [illegible] proposals on the above lines together with revised proforma have been forwarded to the Public (P&D) Deptt. In this circumstance, no further action is necessary on the representation in the ref. 1st cited.

GOVERNMENT OF MADRAS,
AGRICULTURE (FOOD PRODUCTION) DEPARTMENT
***

Explanatory note on Minor Irrigation Schemes under the major head 'Agriculture' in the Second Five Year Plan.

(i) Special Minor Irrigation Schemes:

This is only a continuation of a scheme already under ;ecution in the First Five Year Plan Period and there is vast ;ope for development of irrigation and increase in food produc· ion under the head with the gradual taking over of Zamindaries ıe Government. The scheme involves construction of new irriga ion works and repairs to existing irrigation sources as well, ıch as anicuts, dams, regulators, tanks, supply channels, etc. ı irreducible minimim provision of Rs.250/- lakhs has been pro ɔsed for new schemes during the Second Plan Period as against s.210/-lakhs suggested by the Government of India as a result f the discussions of the working Group, taking into considera- ion the fact that a sum of Rs.248/- lakhs has already been spe n these scheme in the first four years of the ~~Five~~ First Five Year lan. In fact, adopting the basic principle enunciated by the lanning Commission that 40% over and above the amount spent uring the First Five Year Plan period may be allowed for the econd Plan, the provision required will be Rs.443/- lakhs for hich there is scope. This will not only show that the reduce(igure of Rs.250/- lakhs now provided for is a very modest one ɔut also emphasizes the fact that this provision will require nhancement in the actual process of implementation during the econd Plan Period. (An anticipated expenditure of about Rs.35 akhs representing pure loan expenditure on continuation work ɔf Special Minor Irrigation Programme in the First Five Year lan, will obviously be met from savings under any other simil ıead of development)

(ii) Desilting-cum-Reclamation of Irrigation tanks:

The proposal is to deepen tank beds and to deposit the excavat silt in a place on the foreshore, where a strip of land is re- claimed from the tank bed and made useful for cultivation. A small dowal bank will be put on the tank side so that there is

no flow of water over the newly reclaimed land. A slight reverse slope to the reclaimed land will also be given. This process of desilting will be combined with raising of Full Tank Level of tanks by a few inches, wherever possible, which is expected to give most economical results. The blocks of reclaimed land will be formed at the foreshore, so as to form effective barriers leaving suitable gaps and a series of check dams are proposed to encourage silting above the tanks and not on the tank bed. It is also proposed to provide a few pipes or stone drops here and there to drain water. Though plans are ready at a cost of Rs.1,250/- lakhs under this schemes, it is proposed to accept tentatively the decision of the Government of India to provide only Rs.50/- lakhs for this scheme, considering the fact that this is a new venture, the scope of which is to be watched for some time.
